we recycle.

# The importance of recycling.

Should it still be said? The world is gradually becoming entangled in its garbage. We're at a point where everyone, citizen and entrepreneur, should dare to call themselves to order. Both in the household and in companies, **sustainable consumption** and **maximum recycling** are becoming increasingly important.

Local, European and international authorities have already set up multiple recycling initiatives and organisations, whom take care of recycling and take-back obligations in our daily lives. Always with one goal: a sustainable and low-waste living environment.

In B2B too, we can and must take the necessary steps 'together':

## Sustainable consumption

Resolutely commit to the use of solid, long-lasting and reusable load carriers and packaging materials in all forms of storage, intralogistics and distribution.

## Maximum recycling

Even the most solid reusable load carriers will sooner or later reach the end of their operating life. If you opt for a renewal, immediately consider the take-back and recycling service that we can offer you.

plastibac. we reuse.

## Our responsibility

At **Plastibac** you can find new durable plastic load carriers. We see it as our responsibility to offer only ecologically acceptable materials, suitable for a cost-effective and professional use in a circular economy. We choose 100% recyclable plastics, so we see it as our responsibility to also take back and recycle them.

### Recyclable plastics

We make it our business to use only sustainable plastics in our range. The excellent resistance of our load carriers guarantees a long service life. Manufacturing is always based on a user-friendly design and production process with **a view to recycling** in the future.

---

### Own environmental awareness

Our own offices and logistics platform are targeted to leave a minimum CO2 footprint. Solar panels, geothermal energy, energy-neutral high-rise building, but also strictly selected and environmentally conscious transport companies. These are just a few examples. Moreover, we encourage our suppliers to produce according to **the eco-design principle**.

---

### Take-back works

Figures show that the recycling of post-consumer plastics is on the rise. Various institutions are encouraging professional recycling processes. As we strongly believe that take-back and recycling works you will already find in our product range multiple **recycled products**.

---

*“It is our responsibility to ensure the take-back and certified recycling of our customers’ end-of-life plastic bins and/or pallets.”*

## End-of-life? We recycle it for you.

Plastibac is committed to maximise the collection of your recyclable and suitable end-of-life plastics and to have them processed and reworked through certified partners into new load carriers or other functional recycled products.

Our strengths:

✓ Transparent agreements

✓ Fast processing

✓ Large storage capacity

✓ Correct pricing

✓ Certified recycling partners

✓ Crates, pallets, barrels, ...

*"We take care of your stock of old load carriers correctly and quickly. With certificate!"*

## From load carrier to load carrier

An important aspect of Plastibac's take-back and recycling commitment is the reprocessing of old stocks of stacking bins and pallets into products for the same application. For this purpose plastics such as PE, PP or PO are collected, crushed into granulates and then reintegrated into production processes.

Result: new pallets, pallet boxes, waste bins in solid regenerate version, ready for new daily use.

*“From our vision ‘Quality for you’ we deliver recycled products that are 100% trusted by our customers.”*

# From load carrier to alternative recycled eco-product

Not every type of plastic is suitable for straight-line recycling into new pallets, boxes or waste containers. Nevertheless, our certified recycling partners with their **reliable know-how** offer many known and less known possibilities for this with the use of various post-consumer mixing residues, PET and PVC recyclates.

# Plastibac, worth your trust

Plastibac endorses the EU initiative 2018/2035 (INI) which requires 100% recycling of all plastic packaging by 2030.

With responsibility and passion for our profession, we guarantee **our customers:**

✓ a take-back system for your end-of-life bins, pallets, barrels

✓ cooperation agreements with certified partners

✓ a long-term vision on sustainable consumption

✓ maximum recycling in words and deeds

*“At Plastibac we dream of a beautiful, low waste world, where plastics are not dumped, but be offered for recycling as much as possible.*

*It is our mission to fully contribute to this with our ‘reuse, reduce, recycle’ programme and thus reduce the impact of plastics on the environment.”*
